

metarion show

In today's world, organization and efficiency are crucial elements for any establishment, especially for amusement parks, VR cinemas, simulators, and gaming centers with diverse visitors and during busy hours. Having a system to ensure better organization and quick operation is vital. The Metarion Show management software is designed and developed by the Metarion company for the better management of VR headsets and gaming devices. With this software, you can monitor all connected headsets, including their remaining battery life, Wi-Fi connection, and temperature. In Metarion Show, you can also view all the videos currently playing, as well as follow the gameplay from the player's perspective inside the headset online.

Virtual reality (VR) escape rooms are an exciting group game experience that takes you into a 3D world to escape virtual rooms by solving puzzles and challenges. Using cutting-edge virtual reality technology, your team must conquer challenges by working together and applying creativity. Metarion escape rooms can be designed and implemented in a variety of scenarios and genres, from intellectual puzzles to scary adventures, and with different sizes and numbers of players.

Mixed Reality is a new technology that blurs the line between the real and virtual worlds and provides a unique experience of interacting with digital and real environments. Using tools like virtual reality headsets and augmented reality, Metarion Mixed Reality enables people to observe and interact with virtual objects in the real world. The Metarion Zombie and Metarion Shooter games, which offer an entertaining experience of these games in the real world, are currently able to showcase this technology. Additionally, Metarion Mixed Reality technology can be used in advertising and teaching.

Metariom shooter2

The combination of virtual reality and shooting offers players a thrilling gaming experience. This is a group-based and fully competitive team game. With the use of virtual reality technology, the sense of being on the battlefield is greatly enhanced, allowing players to aim and shoot at enemies using natural body movements.

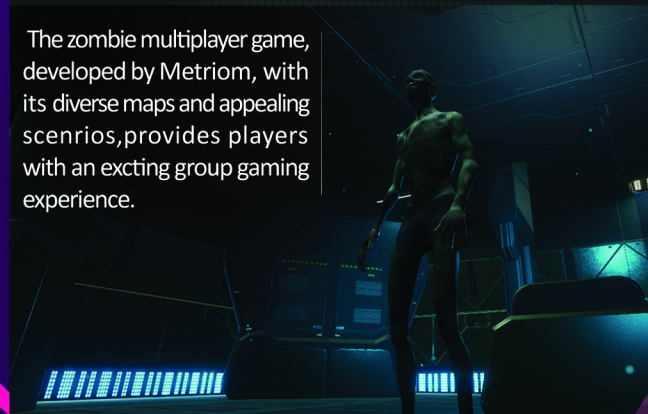

The design of diverse and challenging environments, along with team-based and competitive scenarios, ensures that each game is a unique and intense experience.

METARIOM ZOMBIE

Zombie multiplayer VR games have become one of the most thrilling and exciting experiences in video gaming. In these types of games, players simultaneously find themselves in a world full of terrifying and challenging zombies, where they must work together to survive. Virtual reality makes it possible for players to feel like they are truly living in post-apocalyptic scenarios, as seen in horror films!

The zombie multiplayer game, developed by Metriom, with its diverse maps and appealing scenarios, provides players with an exciting group gaming experience.

FLIGHT SIMULATOR

The dream of flying has always been a long-standing aspiration for humans, and mankind has constantly sought ways to experience flight. Today, with virtual reality simulators, the experience of flying has become much easier than ever before. Flight simulators with kites and gliders in virtual reality offer users an exciting and unique experience of flying through the sky. Players can feel the freedom and lightness while soaring with colorful kites and beautiful gliders. These simulators include breathtaking natural landscapes, from mountains and lakes to vast plains.

The flight simulator developed by Metariom allows users to fly over various cities such as Houston, Paris, London, and more, delivering a truly realistic sensation of flying above these cities.
